Executive Summary

In the implementation of task 4.1, 4.2 and 4.3 including the assessment of the condition and monitoring capabilities of the area covered by the Lower Danube demonstrator, a visit was made to the Srebarna lake, Garvanovo marshes and Malak Preslavets marsh.

A meeting of the partners - participants in the demo with stakeholders - primarily municipalities of settlements in the area of the observed localities was organized.

Questions related to the tasks and benefits of the project were discussed, as well as the position of the stakeholders present and the possibilities for active cooperation to fulfill the tasks of the project.

Data Summary

During the meeting-seminar, which took place on April 25 in the building of the Natural History Museum "Srebarna", presentations were made by CAWRI-BAS, RUNI and Scortel, who presented the project's goals and tasks, its innovation potential, as well as the general plan for the realization of the activities on the territory of the pilot sites of the demonstrator.

the meeting was attended by 18 representatives of all partners in the Lower Danube DEMO (CAWRI-BAS, RUNI, RIEW-Ruse, ADRM, Scortel, and the preparation was carried out by RIEW-Ruse, ADRM and RUNI. 15 representatives of stakeholders (local authorities, representatives of state institutions, other stakeholders) were also present (according to the attached List of attendees). The event was opened by the Mayor of Tutrakan Municipality (Member of the Management Board of ADRM; DaWetrest Associated Partner) and the Chairman of the Municipal Council in Silistra (Municipality of Silistra is also a DaWetRest Associated Partner).

A written questionnaire was prepared, with the help of which an assessment was given by the stakeholders of the possibilities and prospects of the project, as well as some aspects of the current state of the protected area.

After the inspection of Lake Srebarna, on April 26, two of the pilot sites were visited – Garvanovo Marshes and Malak Preslavets Marsh. Photographs were taken (RIEW-Ruse) and observation points were marked, the possibilities of approach to the observation points were reviewed in accordance with the observation plan.
