TracPhone V11IP

One antenna, global coverage

The 3-axis, gyro-stabilized TracPhone® V11IP dual-mode onboard terminal uses a single, small, 1.1-meter antenna to seamlessly access both the C- and Ku-band satellites of the mini-VSAT Broadband™ network for fully global coverage. Unlike competing L-band and Ku-band solutions that require two terminals joined with a router, the TracPhone V11IP is a unified solution: one antenna seamlessly providing both C- and Ku-band services and integrated to one streamlined belowdecks unit.

- ① Unified C/Ku-band RF system provides dual-mode capability from one compact antenna
- ② Highly tuned carbon-fiber dish paired with a custom LNB using KVH's exclusive RingFire™ technology ensures superior reception
- ③ Advanced modular antenna controller for high-speed tracking
- ④ Three-axis pedestal design with a 4th axis of automatic skew adjustment seeks the optimal satellite in the mini-VSAT Broadband network and tracks satellites directly overhead at the equator and low on the horizon at polar latitudes
- ⑤ Robotic, direct-drive, beltless motion control

All VIP-series products include KVH's new **Integrated CommBox Modem (ICM)** with IP-enabled antenna control unit, CommBox™ Network Manager, ArcLight® spread spectrum modem, Voice over IP adapter, and built-in Wi-Fi and Ethernet switch. Systems also feature a browser-based user interface and convenient iPhone® app for system status, updates, and support.
